

# National Development Framework: Easy Read questionnaire

## Part A – the main points of the NDF

Q1. 1. Do you think we are aiming to do the right things with our plan?

No

**Comments:**

Power generation should be installed where power is needed next to population not in rural areas where the electricity needed to be transported to urban areas. There appears to be a complete lack of creativity. Eg. Every street light should have solar with battery storage. Every government building should have a complete renewable energy system. There should be localised battery storage on a communal level. There should be a ban on all pole and tower means of transmission of communications and power lines. Less infrastructure, less impact, less maintenance, better future.

Q2. 2. We have 10 aims in the NDF. Should we think about anything else? Tell us anything we've missed out

Not sure

Q3. 3. Do you think the Plan will help achieve healthy and well-planned places?

No

**Comments:**

There is a complete lack of any firm commitment by private enterprise or government to deliver a single item. It's a lot of talk and a waffle. As I said we need to be creative and show flair, not planning just twenty years ahead. Current thinking states the planet in fifty years will be beyond recovery unless we do something now to reduce human impact. What if this was just ten years or even 5 years.

Q4. 4. Do you think the plan will help us take care of our environment?

Not sure

**Comments:**

Unlikely as businesses and people make the difference, not political bodies. You need to encourage businesses and people to do their bit. You need to ensure the local communities are not impacted but are indeed enhanced by development.

## Part B – different parts of Wales

Q5. 5. Do you agree with our plans for North Wales?

Not sure

**Comments:**

Have read this in detail.

Q6. 6. Do you agree with our plans for Mid and South West Wales?

No

**Comments:**

Using Powys as the power station is illogical as the population does not require it build it next it it required forces on community generation micro hydro in every river or steam, solar on every new building with battery storage small wind turbines. Insist on micro wave and cableless broadband using wooded poles and stringing cables is just looking backwards.

Q7. 7. Do you agree with our plans for South East Wales?

Not sure

**Comments:**

Have not read this in detail

## Part C

Q8. 8. Do you have any other comments you would like to make about this plan?

Have inspirational targets, eg. The reduction of electrical use by 50% in twenty. Keep the language simple you need to bring board the majority population keep things in meeting/ planning documents simply does engage with masses it normally switches people off and therefore I believe you will get less then 5% of the population to response to the NDF.

## Submit your response

Q9. You are about to submit your response. Please ensure you are satisfied with the answers you have provided before sending.

Name                      Gez Linthwaite

Where are you  
from?

[REDACTED]
