Cynnwys

Crynodeb yr adroddiad ar sefyllfa COVID-19

What is the current status of the epidemic?

What is the situation with the NHS and social care?

What is the situation with education, children and young adults?

What does the situation look like going forward?

What is the situation with arriving travellers

Mobility data, adherence and UK comparison

Key risks and sources

Crynodeb yr adroddiad ar sefyllfa COVID-19

Pwyntiau allweddol i'w nodi

Mae Cymru ar Lefel Rhybudd 2.

Mae achosion COVID-19 yn gymharol isel ar draws y rhan fwyaf o Gymru. Mae canran y bobl sy'n profi'n bositif am COVID-19 yn parhau'n gymharol isel. Sleid 3, Ffynhonnell: PHW

Mae trosglwyddiadau COVID-19 yn cynyddu ychydig yn gyffredinol ond yn gymharol isel. Mae'r amcangyfrif consensws ar gyfer y rhif atgynhyrchu yng Nghymru rhwng 0.8 ac 1.1. Ffynhonnell: SPI-M/SAGE, 25 Mai 2021.

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Mae'r pwysau sydd ar y GIG oherwydd COVID-19 wedi sefydlogi yn gyffredinol ac mae'n debyg i'r lefelau isaf a welwyd ers i gofnodion ddechrau. Gweler hefyd sleid 4, Ffynhonnell: Data Gweithredol GIG Cymru

Mae 39 achos ychwanegol o'r amrywiolyn Delta (B.1.617.2, a nodwyd gyntaf yn India) wedi'u darganfod yng Nghymru, ar 03 Mehefin, gan ddod â'r cyfanswm i 97 o achosion a gadarnhawyd. Ffynhonnell: PHW

Mae'r amrywiolyn Delta wedi bod yn lledaenu'n gyflym ar draws y DU, gyda thwrf ym mhob un o ranbarthau Lloegr lle mae amrywiolyn Delta yn cyfrif am o leiaf 25% o'r achosion. Amcangyfrifir fod yr amrywiolyn hwn oddeutu 40% i 60% yn fwy trosglwyddadwy na'r amrywiolyn Alfa (B.1.1.7) a rhagwelir y bydd yr amrywiolyn hwn yn datblygu i fod yr amrywiolyn mwyaf cyffredin yng Nghymru. Nid oes digon o ddata ar hyn o bryd i asesu faint o bosibilrwydd sydd y gallai'r amrywiolyn hwn ddianc rhag ymateb imiwnyddol, ond ceir arwyddion cynnar y gallai'r brechlyn ddiogelu llai yn erbyn yr amrywiolyn hwn i ryw raddau. Ffynhonnell: SAGE, 3 Mehefin 2021

O ran brechu, ar 26 Mai 2021, roedd cyfanswm o 3.31 miliwn o ddosau o frechlyn COVID-19 wedi cael eu rhoi yng Nghymru. O'r 3.31 miliwn o ddosau a roddwyd yn genedlaethol, dosau cyntaf oedd 2.16 miliwn ohonynt ac ail ddosau oedd 1.16 miliwn ohonynt. Os na cheir unrhyw ymddygiadau diogelu eraill, ni fydd y niferoedd presennol sydd wedi'u brechu yn diogelu ar lefel y boblogaeth gyfan. Ffynhonnell: PHW

Dangosyddion allweddol

Mae'r rhan fwyaf o ddangosyddion allweddol yn parhau i ostwng neu'n parhau'n sefydlog, yn dilyn cyfnod o drosglwyddiadau uchel ym mis Rhagfyr a mis Ionawr.

Sylwer bod y saethau yn cynrychioli newid mewn cymhariaeth ar gyfer yr wythnos ddiwethaf.

At a Wales level, on 28 May, the 7-day rolling incidence of COVID-19 cases and the percentage of people testing positive for COVID-19 have decreased slightly since last week.

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Evch i <https://llyw.cymru/adroddiad-sefyllfaol-covid-19-3-mehefin-2021-html> i weld y fersiwn ddiweddaraf. Gwybdaeth am [hawlfraint](#).

The SAGE/ SPI-M consensus estimate of Reproduction number (Rt) is 0.8 - 1.1 (as at 25 May 2021). When we look at reproduction numbers using PHW positive test data only (see second table below) - a more timely estimate but limited by variation in testing - we see a reproduction number estimate of 0.89 for Wales. At local health board level, there is considerable variation in the reproduction number (cases only) estimate. The central estimate of the reproduction number (cases only) is at or above 1 for Hywel Dda and Betsi Cadwaladr health boards.

7-day cumulative case incidence remains low across Wales, with all local authorities below 20 cases per 100,000 population. At a Wales level, cases per 100,000 is currently at 7.7 per 100,000 population. This is a slight decrease compared to the previous report (8.9 per 100,000 population).

Incidence varies by local authority and age. Conwy and Bridgend have the highest case incidences, but are both below the threshold of 20 cases per 100,000. However, Conwy's case incidence has increased over the past week.

The table below also provides estimates of doubling and halving times based on COVID-19 positive test data. In this table, halving times are positive, whilst doubling times are negative. The 95% confidence intervals are showing in brackets after the central estimate. An asterisk (*) means that there are small numbers and estimates should be treated with caution. Local health board level estimates of Rt and halving times will be unstable when incidence is low.

Reproduction number (based on positive tests only) PHW data by Local Health Board as at 2 June 2021

Area	Rt (95% CI)	Halving time (95% CI)
All Wales	0.9 (0.8 to 1.0)	541.5 (17 to -18) DOUBLING
Swansea Bay UHB	0.7 (0.5 to 1.0)	31.5 (8 to -16)
CTM UHB	0.7 (0.5 to 0.9)	59 (4 to -5)

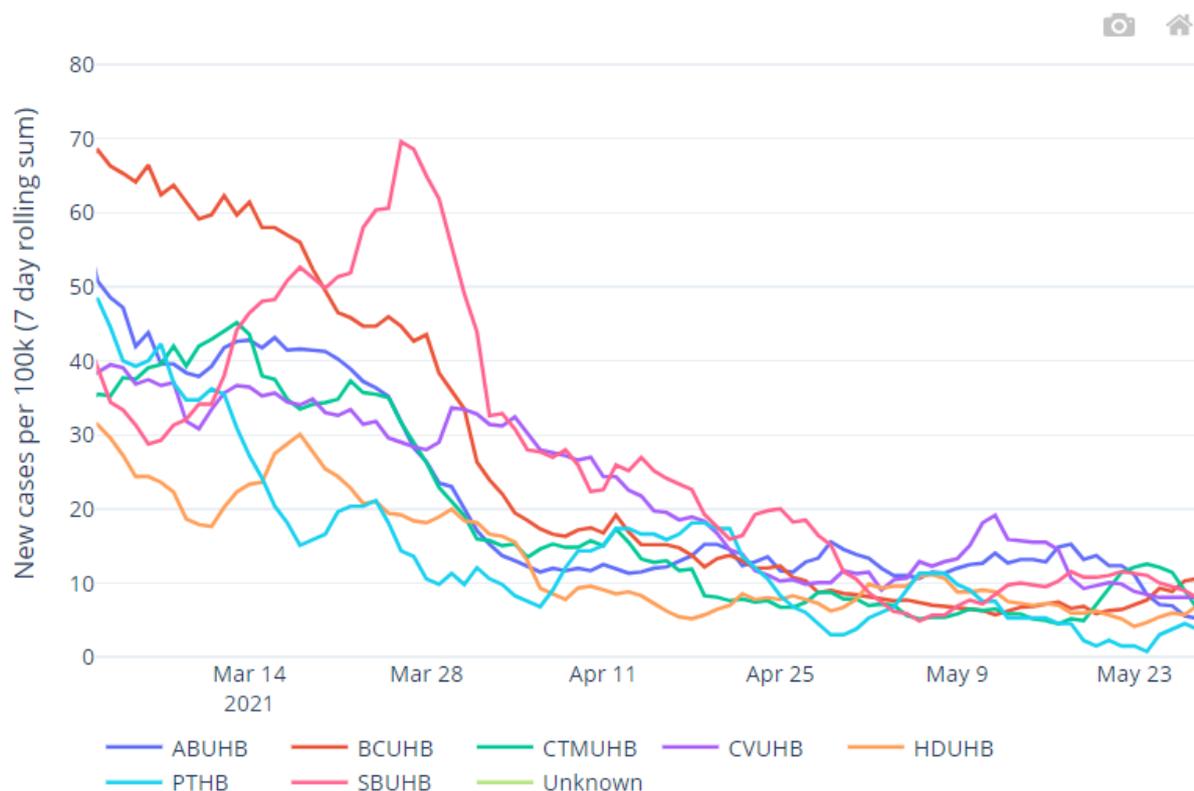

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Cases per 100k by age (PHW Data) (7 day rolling sum)

Data as at 12:00PM 02 June 2021 unless otherwise specified

What is the situation with the NHS and social care?

COVID-19 pressure on the NHS has generally stabilised and is now similar to the lowest levels since reporting began. As at 2 June 2021, there were 131 COVID-19 related patients (Suspected, Confirmed and Recovering) occupying a hospital bed. This compares to 180 (49 fewer occupied beds) on 26 May 2021. Confirmed patients accounted for 14 of the total occupied beds, and are at similar levels to early September 2020.

There are 3 patients with Suspected or Confirmed COVID-19 in critical care beds in Wales. This is 161 lower than the maximum COVID-19 position of approximately 164. The total number of patients in critical care for both COVID-19 and non-COVID-19 stands at 150, 2 fewer than the historic maximum critical care capacity of approximately 152.

The situation with care homes remains stable with a relatively low number of care home incidents reported across Wales.

In the 7 days up to 20 May 2021, 6 (0.6%) adult care homes in Wales notified CIW of one or more confirmed cases of COVID-19, in staff or residents. This is 3 fewer notifications compared to the last 7 days up to 13 May 2021. The number of notifications is similar to the lowest levels since the beginning of the reporting period on 16 December 2020.

Number of adult care homes reported an ongoing outbreak/incident (last 7 days)

What is the situation with education, children and young adults?

Childcare settings

The latest National Situation Background Assessment Recommendation (SBAR) covering the week of 24 May to 30 May reported no new or ongoing clusters in childcare settings.

Schools

The National SBAR for the above period reported 2 new clusters and 8 ongoing clusters associated with schools. There were 34 incidents attributed to a school setting and 24 attributed to household, social or extra-curricular activities.

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

IMTs report on two of the more notable clusters and the impact of the Delta VOC on a school:

- One Incident Management Team (IMT) reported a primary school cluster of 22 cases, including pupils, staff and family members, resulting in 2 school bubbles (56 pupils) required to self-isolate. All pupils tested and a Mobile Testing Unit (MTU) set up in the area.
- A dedicated IMT has been set up to manage a further cluster. A teaching assistant working with year 1 pupils has been identified as the index case. Teacher and pupil cases have been reported in years 1&3. All pupils in year 1&3 have been self-isolating and their contacts have undergone testing, with samples confirmed as the Alpha variant. Local authority communications have been issued and a MTU is in place. Total cases as 26/05/21 = 30
- Following a confirmed Delta VOC case, a class of school pupils were tested. Sequencing results are awaited, but one positive case is assumed to be the Delta VOC. Potential contacts have been tested and all of those tested returned negative results. One linked individual is symptomatic, resulting in their household being required to self-isolate. Source: National SBAR.

Epidemiological curve of cases in all staff and pupils linked to a school between 01 September 2020 to 31 May for all Wales maintained schools

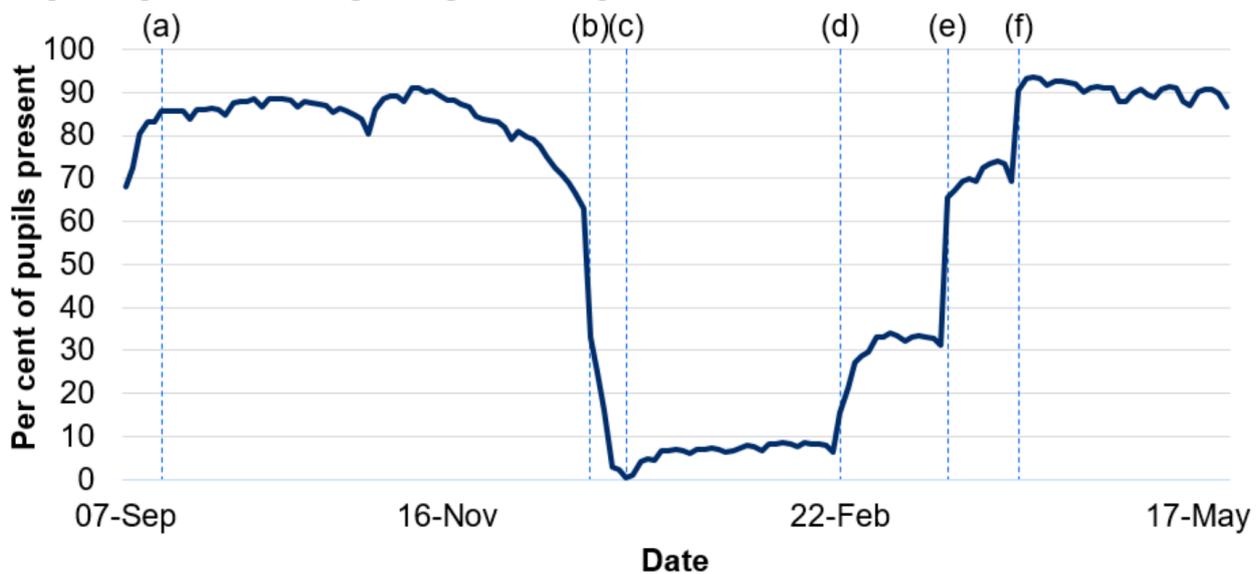

School Attendance

An average of 90% of all pupils were present in school over the week of 17 May to 21 May. This information is provisional and will be revised on 9 June. Source: Stats Wales

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Ewch i <https://llyw.cymru/adroddiad-sefyllfaol-covid-19-3-mehefin-2021-html> i weld y fersiwn ddiweddaraf. Gwybdaeth am [hawlfraint](#).

Pupils present by day, 7 September 2020 onwards

Further Education (FE)

There are no new or ongoing clusters within FE settings in Wales. Source: SBAR

Higher Education Institutions (HEIs)

HEIs report cases notified to them by students and staff. From 1 February 2021 most HEIs have changed the way in which they report data, with positive cases referring only to students or staff attending campus or returning to the local area for study (with the exception of University of Wales Trinity St David's who are unable to split cases on this basis). Over the past week, the 7-day rolling average has been less than 1 positive COVID-19 cases for all HEI's. Source: Stats Wales

We now also capture data via the National SBAR from local IMTs. 1 new cluster of 2 linked cases in one residence on a university campus (cases were out of isolation on 29/05/21). There were 3 ongoing clusters reported over 2 health board areas, which is the same as the previous week. Source: National SBAR

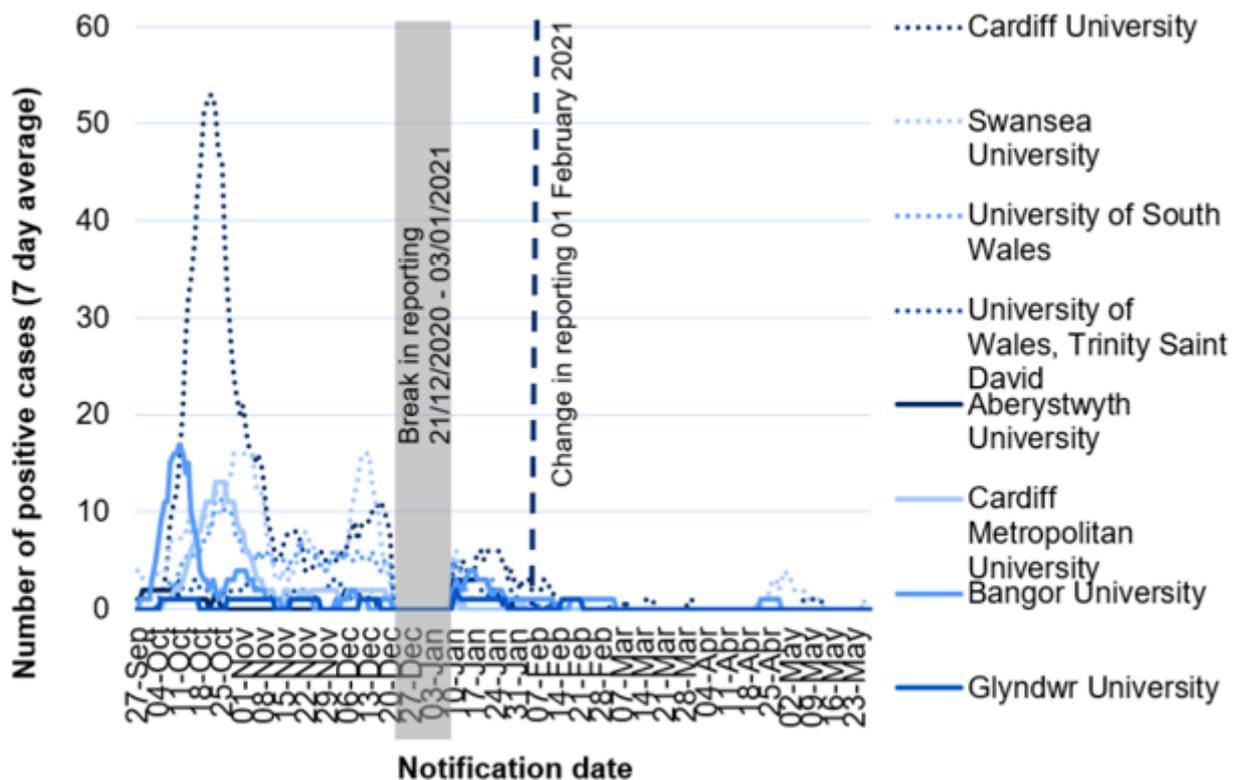

There is currently voluntary lateral flow device (LFD) testing of childcare staff,

Number of deaths per day, Wales

SPI-M's consensus view is that the number of deaths in Wales will remain very low over the next four weeks

- Hospitalisations per day - continue to decrease to under 1 per day over the next four weeks. Source: Modelled medium term projections, SAGE/SPI-M, 1 June

Hospitalisations per day, Wales

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Ewch i <https://llyw.cymru/adroddiad-sefyllfaol-covid-19-3-mehefin-2021-html> i weld y fersiwn ddiweddaraf. Gwybdaeth am [hawlfraint](#).

These projections are based on current trends and will not fully reflect the impact of policy or behavioural changes over the past two to three weeks. The projections include the impact of vaccines, but cannot capture any future increases in transmission resulting from new variants. They are not forecasts or predictions.

Projecting forwards is difficult when numbers fall to very low levels, therefore SPI-M-O have decided to pause producing medium term projections where this is the case. The small numbers can also introduce apparent inconsistency as regions are aggregated.

What is the situation with arriving travellers

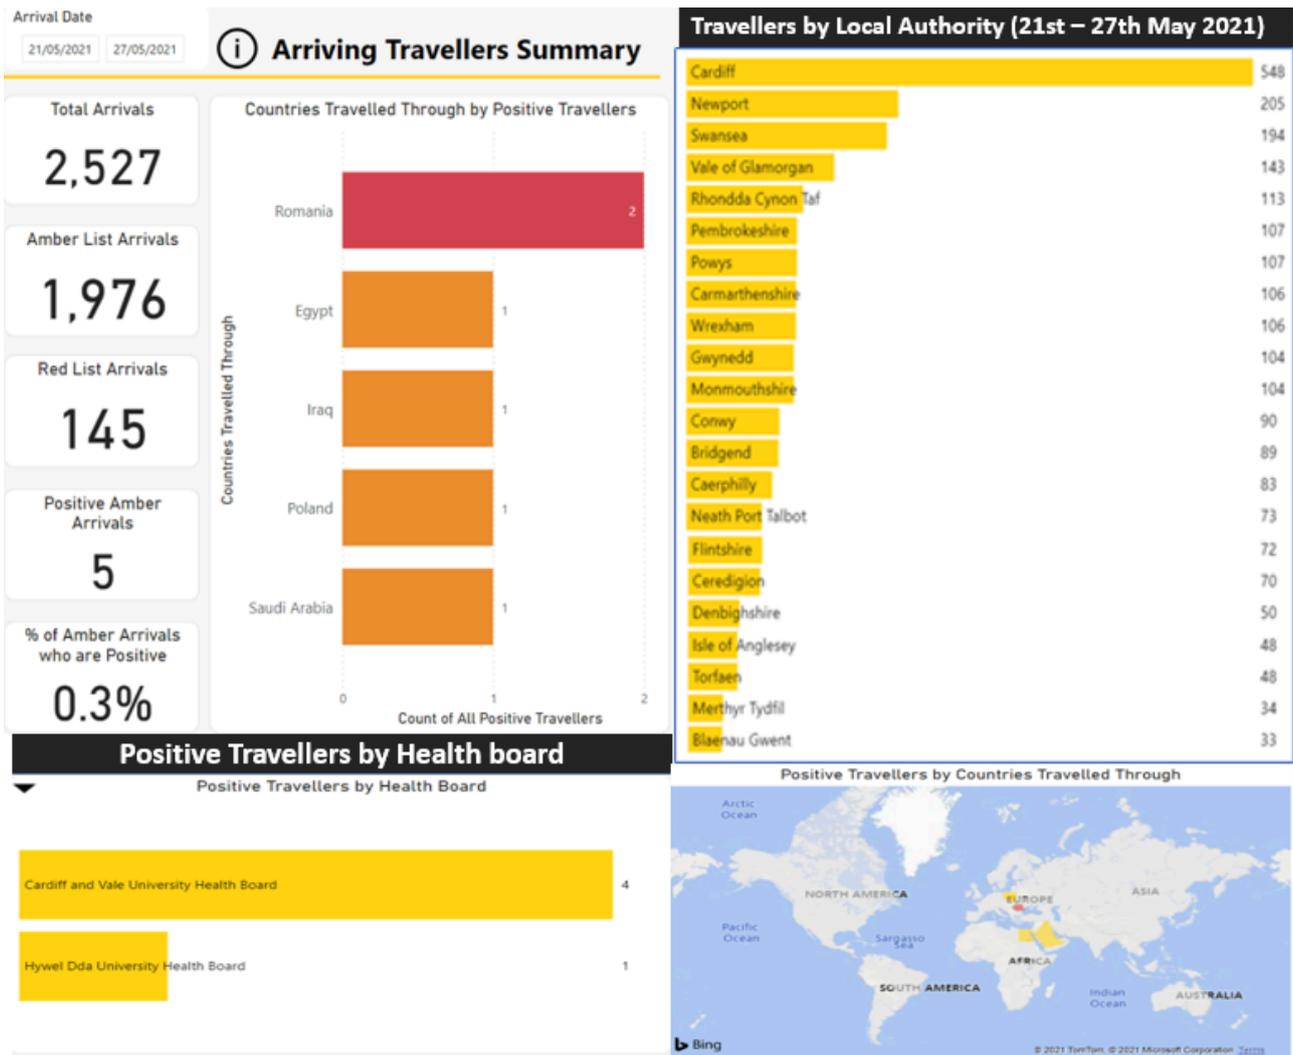

Traveller numbers have risen significantly in recent days with arrivals for Sunday 30th May almost double arrivals for Sunday 23rd May.

Arrivals from Portugal (Green List) have also seen a significant rise with over 230 arriving on Sunday 30th May alone. Week on week has seen an increase of over 400% in arrivals from Portugal. We anticipate further increases in these numbers at the end of this week (bank holiday/half term week).

- There has been an increase of 792 (31%) in the overall arrivals compared to last week.
- There have been no positive cases from Green list countries.
- Positive amber cases remain low.
- Overall arrivals are now rising significantly.

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Please note that the data provided by the Home Office is derived from Passenger Locator Forms (PLF) which are self-completed by travellers. As such, data may contain inaccuracies. Due to the limitations associated with data capture and legislation, some minor discrepancies may be present in the data.

Mobility data, adherence and UK comparison

Mobility data up to 27 May, show mostly small increases in the last week, with a larger increase in retail & recreation. During this period residential mobility (i.e people spending time at home) decreased slightly to 5% above baseline. Workplaces rose slightly to 20% below baseline. Retail & recreation mobility increased to 7% below baseline and supermarkets & pharmacy increased to 12% above the baseline. Public transport and parks mobility also increased relative to the baseline. Source: Google

Adherence

IPSOS MORI data for 21 – 24 May for Wales reports reductions in some categories since 4 weeks ago, most notably a large reduction in those making essential trips only and avoiding public transport. Since the previous survey, Wales moved from alert level 4 to level 2 and restrictions on movement have eased. Note self-reported adherence is affected by individuals' understanding of rules and guidance. Source: IPSOS MORI

Results from the Coronavirus (Covid-19) Infection Survey, 23 to 29 May

Although positivity rates remain low for all four UK countries, positivity rates have increased in recent weeks, especially for England and Wales. In comparison, the positivity rate appears to have remained stable in the latest week to 29 May for Scotland and slightly increased in Northern Ireland.

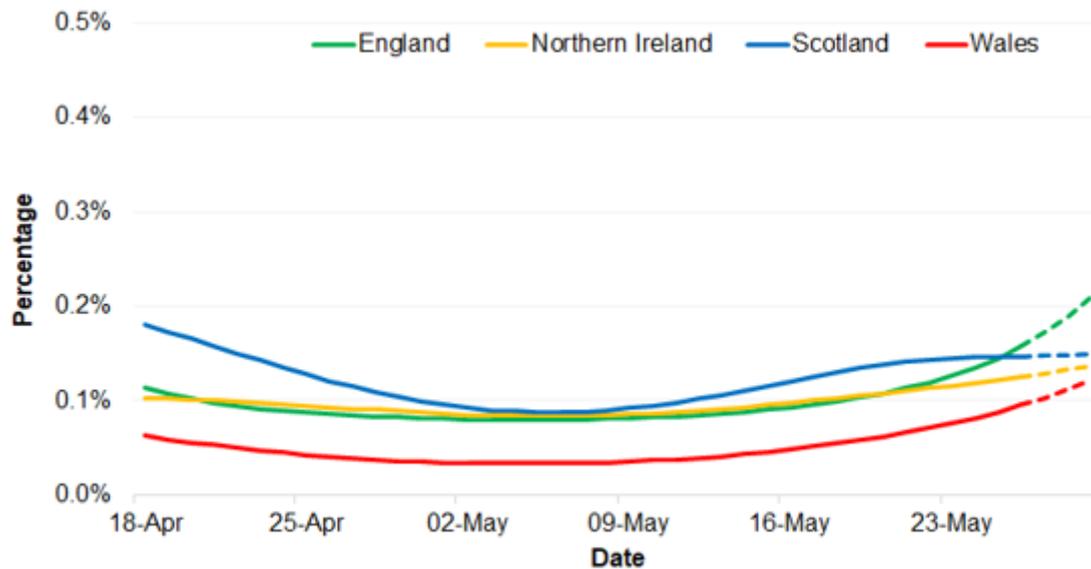

During the most recent period, it is estimated that an average of 2,900 people in Wales had COVID-19 (95% credible interval: 1000 to 5,800), equating to around 1 in 1,050 people. This compares to around 1 in 640 people in England, around 1 in 680 people in Scotland, and around 1 in 800 people in Northern Ireland.

Key risks and sources

Key risks

Transmissions, incidence and prevalence

Overall transmission is slightly increasing but remains relatively low.

NHS Capacity

COVID-19 pressure on the NHS remains at a relatively low level. Some fluctuations are likely to occur, due to low numbers.

Mortality

Remains at a generally low level.

Variants

Additional cases of Delta variant (VOC21APR-02, first identified in India) have been detected in Wales, although numbers remain low. There is strong evidence of increased transmissibility and local intervention will likely be required to prevent uncontrolled growth and wider community transmission.

Immunity and vaccines

3.31 million doses of COVID-19 vaccine have been given in Wales. Of the 3.31 million doses given nationally, 2.16 million were first doses and 1.16 million were second doses.

International

Traveller numbers have increased compared to the previous week, following the addition of Portugal to the Green list. Positive amber cases remain low. There have been no positive cases from green list countries.
