Crynodeb yr adroddiad ar sefyllfa COVID-19

Y pwyntiau allweddol i'w nodi

Symudodd Cymru i **Lefel Rhybudd 0** ar 7 Awst.

Mae achosion cyffredinol COVID-19 a phositifedd profion wedi cynyddu ledled Cymru. Mae'r gyfradd tyfiant wedi cynyddu dros y mis diwethaf, gyda'r amser dyblu yn lleihau o 67 diwrnod ar 27 Gorffennaf i 8.6 diwrnod ar 24 Awst 2021. Bydd angen i ni fonitro cyfraddau achosion a dangosyddion allweddol eraill ym mhob gwlad yn ofalus i ddeall effaith llacio'r cyfyngiadau a dychwelyd i'r ysgol yn well.

Mae amcangyfrif consensws y Gyd-ganolfan Biודdiogelwch (JBC) ar gyfer y rhif atgynhyrchu yng Nghymru rhwng 1.2 a 1.4 (fel ar 1 Medi 2021), tra bod amcangyfrif lechyd Cyhoeddus Cymru (PHW) rhwng 1.2 a 1.3 (1 Medi 2021). Sylwer bod fel arfer oedi o 2 i 3 wythnos yn amcangyfrif JBC a bod oedi yn achos amcangyfrif PHW, sy'n defnyddio methodoleg wahanol, o tua 1 wythnos. Sleid 3, Ffynhonnell: PHW.

Mae nifer o bobl mewn gwelyau yn yr ysbyty ac mewn unedau gofal dwys yn cynyddu'n gyflym ar gyfer pob bwrdd iechyd yng Nghymru. Ar 1 Medi 2021, roedd 338 o gleifion COVID-19 (Amheuaeth, Cadarnhawyd, a oedd yn Gwella) mewn gwelyau ysbyty (+74 ers yr wythnos flaenorol), lle'r oedd 321 ohonynt wedi eu cadarnhau. Mae 44 o gleifion gydag Amheuaeth o, neu COVID-19 wedi cadarnhau mewn gwelyau gofal critigol yng Nghymru, 120 yn is na'r mwyafswm posibl COVID-19 o oddeutu 164.

Yn y 7 diwrnod i 25 Awst 2021, rhoddodd 80 (7.5%) o gartrefi gofal oedolion yng Nghymru wybod i CIW o un neu fwy o achosion a gadarnhawyd o COVID-19, mewn staff neu breswylwyr. Mae hyn yn 26 yn fwy o hysbysiadau na'r cyfnod 7 diwrnod blaenorol, ac yn cymharu â 4 hysbysiad yn y 7 diwrnod hyd at 2

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Gwybdaeth am [hawlfraint](#).

Mehefin 2021.

Ar 31 Awst 2021, roedd gan Gymru 18,548 o achosion a gadarnhawyd o'r amrywiolyn amlycaf Delta (cynnydd o 2,096 o'r wythnos flaenorol). Ni chanfuwyd unrhyw amrywiolyn sy'n peri pryder arall yng Nghymru. Mae data ynghylch statws brechu'r achosion a derbyniadau i'r ysbyty yn cael eu diwygio gan lechyd Cyhoeddus Cymru ar hyn o bryd felly nid ydynt ar gael. Ffynhonnell: PHW.

Am 10pm ar 1 Medi, mae cyfanswm o 4,539,655 (+26,926) o ddsau o frechlyn COVID-19 wedi eu rhoi yng Nghymru a'u cofnodi yn System Imiwneiddio COVID-19 Cymru. O'r rhain roedd 2,355,999 (+12,628) yn ddsau cyntaf a 2,183,656 (+14,298) yn ail ddsau. Ffynhonnell: PHW.

Dangosyddion allweddol

Mae pob dangosydd allweddol wedi cynyddu ers yr wythnos flaenorol.

Sylwer bod y saethau yn cynrychioli newid mewn cymhariaeth â'r wythnos ddiwethaf.

Gwybdaeth am [hawlfraint](#).

Local Authority	Number	% of All Wales Total	Case Incidence per 100,000	Change from previous week
Unknown	81	0.6%	-	-31% ↓
Total	12884	100.0%	408.6	27% ↑

At a Wales level, on 27 August 2021, the 7-day rolling incidence of COVID-19 cases and percentage of people testing positive for COVID-19 have increased since last week (slide 2).

The JBC consensus Reproduction number (Rt) estimate for Wales is between 1.2 and 1.4 (reported 1 September 2021), with daily growth rate of between +3% and +7% and a doubling time between 10 and 20 days. Using PHW positive test data only (more timely data but limited by variation in testing), Rt is estimated to be between 1.2 and 1.3 for Wales (1 September 2021). The central Rt estimate is highest for Swansea Bay and Cwm Taf Morgannwg health boards at 1.4. Source: JBC/PHW.

7-day cumulative case incidence in Wales has increased by 27% to 408.6 per 100,000 population in the last week.

Case incidence is increasing in 20 of the 22 local authorities. Case incidence is above 500 per 100,000 population for four local authorities. Local authorities with the highest case incidences are Swansea and Neath Port Talbot at 653.9 and 585.4 per 100,000 population, respectively.

Case incidence increased in most age groups this week. Although case incidence remains highest in those aged 10-19, case incidence remained steady this week following sharp increases in previous weeks in this age group. Case incidence is highest for the Swansea Bay health board and increased for all health boards in the last week.

Cafodd y ddogfen hon ei lawrlwytho o LLYW.CYMRU, efallai nad dyma'r fersiwn mwyaf diweddar.

Gwybdaeth am [hawlfraint](#).

The second table below provides estimates of doubling and halving times based on PHW COVID-19 positive test data. In this table, doubling times are positive, whilst halving times are negative. The 95% confidence intervals are showing in brackets after the central estimate. An asterisk (*) means that there are small numbers and estimates should be treated with caution. Local health board level estimates of Rt and halving times will be unstable when incidence is low.

Reproduction number and halving time (PHW methodology) PHW data by Local Health Board (1 September 2021 estimate)

Area	Rt (cases)	Doubling time (days)
All Wales	1.2 (1.2 to 1.3)	15 (10 to 34)
Swansea Bay UHB	1.4 (1.3 to 1.4)	9 (60 to 18)
CTM UHB	1.4 (1.3 to 1.4)	12 (7 to 27)
Aneurin Bevan UHB	1.2 (1.2 to 1.3)	19 (11 to 62)
Cardiff & Vale UHB	1.2 (1.2 to 1.3)	18 (11 to 62)
Hywel Dda UHB*	1.3 (1.2 to 1.4)	12 (7 to 29*)
Powys THB*	1.2 (1.1 to 1.3)	16 (8 to 264)*
Betsi Cadwaladr UHB	1.2 (1.1 to 1.2)	23 (14 to 65)

Cases per 100k by age (PHW Data) (7 day rolling sum to 28 August)

Data as at 12:00PM 1 September 2021 unless otherwise specified.

What is the situation with the NHS and social care?

From early July 2021, COVID-19 pressure on the NHS has been generally increasing. As at 1 September 2021, there were 383 COVID-19 related patients (Suspected, Confirmed and Recovering) occupying a hospital bed. This compares to 309 (74 more occupied beds) on 25 August 2021. Confirmed patients accounted for 321 of the total occupied beds.

There are 44 patients with Suspected or Confirmed COVID-19 in critical care beds in Wales. This is 120 lower than the maximum COVID-19 position of approximately 164. The total number of patients in critical care for both COVID-19 and non-COVID-19 stands at 172, 20 more than the historic maximum critical care capacity of approximately 152.

Gwybdaeth am [hawlfraint](#).

In the 7 days up to 25 August 2021, 80 (7.5%) adult care homes in Wales notified CIW of one or more confirmed cases of COVID-19, in staff or residents. This is 26 more notifications compared to the 7 days up to 18 August 2021 and compares to 4 notifications in the 7 days up to 2 June 2021, which was the lowest number of notifications since reporting began on 16 December 2020.

Wastewater Monitoring for COVID-19

In the week ending 29 August 2021, the wastewater signal broadly confirms the national trend in positive COVID-19 cases (PHW) over the same period.

The normalised wastewater SARS-CoV-2 signal across North Wales sites and South Wales sites has been generally increasing over the past 4 weeks, however there has been a slight fall in South Wales in the latest week.

Comparing the week ending 29 August 2021 with the previous week, there are still differences between the change in SARS-CoV-2 signal from wastewater data and the change in COVID-19 case incidence data (PHW) over the same time period. (See Table 1)

Wastewater signal is a relatively unbiased indicator because it is not dependent on testing policy and behaviour. The characteristics of the individual sewerage

Enwch i <https://www.llyw.cymru/adroddiad-sefyllfaol-covid-19-3-medi-2021-html> i weld y fersiwn ddiweddaraf.

Gwybdaeth am [hawlfraint](#).

systems could have an impact on the signal being seen. Subsequently, the relationship between cases and wastewater signal is still being investigated.

Sites/regions on the watch-list (increases and/or divergence between SARS-CoV-2 signal and corresponding LSOA PHW COVID-19 case data over the past 2-4 weeks): Chester, Bangor and Wrexham in North Wales; and Cog Moors in South Wales.

Wastewater SARS-CoV-2 signal data below limit of detection recorded as zero. The wastewater data for individual WwTW sites, normalised and unnormalised are inherently noisy. Sampling from Treborth has not been consistent due to construction work at the site, and this has impacted on the North Wales average figures. Wastewater data analysis and reporting is still in a pilot stage and should not be relied upon in isolation.

Changes in mean normalised SARS-CoV-2 signal by catchment. Means taken over each of the last two weeks for each catchment

What is the situation with arriving travellers?

The greatest number of arrivals are from Spain, although the increase for the week is in line with the overall rise in arrival numbers. There were, however, significant increases in arrivals from France (34.8%) and Italy (41.2%).

17,814 total arrivals for the week (14,928 last week)

- Red: 102 (126 last week)
- Amber: 15,223 (12,430 last week)
- Green: 2,489 (2,372 last week)

The highest numbers of arrivals testing positive on return are from Spain, with 13 to date for the period, with a positivity rate of 0.24% - although this has decreased when comparing to the previous week with 16 testing positive at a

capture and legislation, some minor discrepancies may be present in the data. Countries with 10 or less travellers have been included in the overall positive traveler total, but excluded from the Green/Amber/Red positive traveller breakdown totals for personal identifiable information purposes.

Mobility data, adherence and UK comparison

Mobility data by location of trip, Welsh local authorities

The latest mobility data shows increases in the latest week in some categories (eg retail and recreation) compared to the previous week. The baseline for much of the data is during January to February 2020 and changes are relative to that period. It is not possible to determine if mobility is higher/lower than would have been expected prior to the pandemic as data for 2019 or earlier years is not published.

Adherence

The **most recent IPSOS MORI data** for the period 13 August – 16 August for Wales shows a decrease compared with the last survey wave in those only leaving home for essential trips, while those maintaining 2m social distance remained steady.

Results from the coronavirus (COVID-19) Infection Survey, 22 to 28 August

The percentage of people in the community population testing positive has levelled off in England, increased in Scotland and decreased in Northern Ireland, while the trend is uncertain in Wales. Positivity is highest in Northern Ireland (1.56%) and lowest in Wales (0.92%).

It is estimated that an average of 28,100 people in Wales had COVID-19 (95% credible interval: 20,000 to 38,400), equating to around 1 in 110 people or 0.92% of the community population (up from 0.83% last week). This compares to around 1 in 70 people in England, around 1 in 75 people in Scotland, and around 1 in 65 people in Northern Ireland.

Immunity estimates and antibody status of individuals aged 16 and over in Wales

The COVID-19 vaccination rollout of first and second doses has slowed in Wales. As at 28 August 2021, 89% of people aged 16 and over had received at least one COVID-19 vaccine dose in Wales. 6% of people aged 16 and over had exactly one vaccine dose and 84% were fully vaccinated.

Between 9 and 13 August 2021, the ONS COVID-19 Infection Survey estimated that 92.0% of the community population aged 16 and over in Wales tested positive for COVID-19 antibodies.

As at 28 August 2021, it is estimated that 88% of people aged 16 and over in Wales had some immunity against COVID-19 infection. The lower and higher estimates of immunity are 83% and 91% of people aged 16 and over in Wales. If no vaccines had been administered, it is estimated that 41% of people aged 16

Gwybdaeth am [hawlfraint](#).

and over would be immune.

It is currently estimated that over 80% (may be closer to 90%) of the population, spread evenly across Wales, must be immune to COVID-19 before population immunity effects would be observed (TAG advice on the Delta variant, published 18 June 2021). Note that the immunity estimate of 88% is for individuals aged 16 and over, not the total Wales population, and varies across age groups.

Differences between antibody presence and immunity estimates include:

- ONS antibody estimates are based on study participants who have volunteered for the study and estimates are extrapolated.
- ONS estimates are based on the 16+ community population, which excludes people in care homes or hospitals. Immunity estimates are based on the whole 16+ Wales population.
- While antibody protection doesn't equal immunity from infection, it does give a useful indication of the level of protection from infection in the Welsh population.
- Antibody estimates use 2019 mid-year population estimates while the immunity estimates use 2020 mid-year estimates.

Note: The lower, central and higher immunity estimates use cautious, central and optimistic vaccine efficacy and immunity-following-natural-infection assumptions, and do not account for waning immunity.

What does the situation look like going forward?

Based on the current rates observed with current restrictions:

Gwybdaeth am [hawlfraint](#).

Rising trends across health boards and local authorities.

NHS capacity

From early-July 2021, COVID-19 pressure on the NHS has been generally increasing.

Mortality

Low, but slowly rising number of daily deaths in the most recent week.

Variants

Wales has 18,548 confirmed cases of the Delta variant (an increase of 2,096 from the previous week). Delta remains the dominant variant of COVID-19 in Wales.

Immunity and vaccines

4,539,655 (+26,926) doses of COVID-19 vaccine were given in Wales and recorded in the COVID-19 Welsh Immunisation System. Of this 2,355,999 (+12,628) were first doses and 2,183,656 (+14,298) were second doses. 88% of those aged 16 and over in Wales were estimated to have some immunity against COVID-19 infection at 28 August 2021.

International

There is an increase in traveller numbers this week. However the proportion of travellers testing positive is relatively low.
