

Fire and rescue authority performance, 2015-16

22 Sept 2016
SFR 123/2016

Key Points

39 fires per 10,000 population

There were 12,110 fires attended by the FRAs, an increase of 4 per cent in the number compared with 2014-15. Since responsibility for fire and rescue services was devolved to Wales in 2004-05 the rate has more than halved.

Chart 1 Total fires attended per 10,000 population

48 false alarms per 10,000
population

There were 14,917 false alarms
attended in 2015-16 (*page 4*)

8 casualties per 100,000
population

There were 245 casualties (deaths
and those sent to hospital) from fires
in 2015-16, an increase in numbers
of 27 per cent. (*page 6*)

About this release

The Welsh Government's Performance Management Framework for measuring Fire and Rescue Authority (FRA) performance was introduced in 2007.

Following a consultation in 2015 the number of indicators comprising the framework was reduced. The new performance indicators are grouped under two themes: 'risk reduction and community safety' and 'effective response'.

In this release

Risk reduction and community safety	3
Effective response	8
Glossary	9
Key quality information	11

Fire and Rescue Authorities (FRAs) have a duty under the Local Government (Wales) Measure 2009 to collect information relating to performance and use that information to compare their performance in previous years and with similar organisations. They are also required to use this information to assess how they can improve.

Following a consultation in 2015, the Performance Indicators collected by the Welsh Government from the Fire and Rescue Authorities were redefined to more accurately measure FRA activity and outcomes. The 3 new indicators have a total of 7 measures and are divided into two themes as defined below:

Risk Reduction and Community Safety

1st Indicator FRS/RRC/S/001:

- i) Total fires attended per 10,000 population;
- v) Total false alarms attended per 10,000 population;
- vi) Total Road Traffic Collisions attended per 10,000 population;
- vii) Total other incidents attended per 10,000 population.

2nd Indicator FRS/RRC/S/002:

Total number of:-

- vii) Deaths and injuries arising from all fires per 100,000 population;
- viii) Deaths and injuries arising from accidental fires per 100,000 population.

Effective Response

3rd Indicator FRS/EFR/S/003:

The percentage of dwelling fires which were contained in the room in which they originated.

For comparability considerations please see the Key Quality Information.

Note: indicators FRS/RRC/S/001 parts ii to iv and FRS/RRC/S/002 parts i to vi are no longer collected, data for these indicators are published on [StatsWales](https://stats.wales.gov.uk/)..

1. Risk reduction and community safety

The first indicator (FRS/RRC/S/001) has 4 measures and looks at attendances at incidents.

Analysis of this data allows FRAs to gauge the success of their community fire safety initiatives in the reduction of fires and false alarms.

FRAs record attendances at fires, false alarms and Special Service Incidents (SSIs) via the Incident Recording System (IRS).

A third of incidents attended in Wales in 2015-16 were fires, whilst 41 per cent were false alarms, 7 per cent were Road Traffic Collisions (RTCs) and 19 per cent were non RTC Special Service Incidents (SSIs). North Wales attended proportionally more fires than the other FRAs (44 per cent of incidents within the FRA), whilst in South Wales the largest category of incident attended were false alarms (45 per cent). In Mid and West Wales false alarms and non RTC SSIs each accounted for around a third of attendances.

Fires attended

In 2015-16, there were 12,110 fires (39 fires per 10,000 population) attended by the FRAs in Wales; this is a 4 per cent increase in numbers compared with 2014-15. The rate (per 10,000 population) is 1 percentage point higher than in 2014-15, but less than half the rate seen in 2004-05 (the start of this time series). Incident data for 2015-16 (published in July 2016¹) shows 60% of fires occurred outdoors, similar to the proportion seen in earlier years. Such fires may be affected by such factors as the weather and the prevalence of litter which in turn helps us understand the fluctuations in fire numbers seen over time.

Throughout the time series the highest rate of fires (per 10,000 population) has been seen in South Wales, although over recent years the rates seen in each FRA have become closer, as can be seen from chart 1 on page 1 and table 1.

Over the timeseries there has been an overall downward trend, however in recent years the numbers and rates have become more erratic.

Table 1 Total number of fires attended per 10,000 population

	North Wales	Mid and West Wales	South Wales	Wales
2004-05	66	83	104	89
2005-06	62	77	95	82
2006-07	68	81	103	89
2007-08	55	76	98	81
2008-09	50	61	74	65
2009-10	49	57	73	63
2010-11	48	63	80	68
2011-12	46	51	59	54

2013-14	35	44	46	43
2014-15	32	39	40	38
2015-16	31	38	44	39

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

¹ <http://gov.wales/statistics-and-research/fire-statistics/?lang=en>

False alarms attended

Prior to 2015-16 only numbers of malicious false alarms and false alarms caused by automatic fire detection were collected for the purposes of performance indicators. The new indicator includes malicious false alarms, good intent false alarms and false alarms due to apparatus. Definitions are given in the Glossary.

In 2015-16 FRAs in Wales attended 14,917 false alarms², equating to 48 per 10,000 population. North Wales FRA attended the fewest false alarms, equating to 29 per 10,000 population; South Wales attended the most (55 per 10,000 population) and Mid and West Wales attended 51 per 10,000 population.

Table 2 False alarms attended in 2015-16

	North Wales	Mid and West Wales	South Wales	Wales
Number of false alarms attended	1,995	4,599	8,323	14,917
Rate per 10,000 population	29	51	55	48

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

Although this is the first year this false alarm data has been collected as part of the Performance Indicators, comparable back data are available.

The chart below shows the rate of fire alarms attended (per 10,000 population) since 2009-10. Notably the rate in North Wales fell in 2015-16, this can be attributed to a change in policy regarding attendance at automatic fire alarms in April 2015.

Chart 2 False alarms attended (a) per 10,000 population

(a) Data prior to 2015-16 were not collected as part of the Performance Indicator data collection but are taken from the Incident Recording System.

² False alarms quoted in this bulletin include those related to Special Service Incidents (SSIs). The statistics published in the Fire Statistics Wales series of bulletins excludes false alarms related to SSIs and are therefore not comparable.

Road Traffic Collisions (RTCs) attended

Prior to 2015-16 numbers of RTCs attended were not collected as part of the performance indicator data collection. Numbers of RTCs attended have been collected and published via the Operational data collection (for years 2004-05 to 2010-11) and via the Incident Recording System (IRS) since 2009-10. For comparability issues see the Key Quality Information.

These data (and for other Special Service Incidents) can be found on [StatsWales](#).

In 2015-16 FRAs in Wales attended 2,613 RTCs, equating to 8 per 10,000 population. South Wales FRA attended the most 1,322 RTCs, but Mid and West Wales had a higher rate per population; North Wales attended the fewest 212 and had the lowest rate per population (3). RTCs accounted for over a quarter of SSIs attended in Wales in 2015-16. This proportion was highest in South Wales where almost two fifths of SSIs were RTCs.

Table 3 Road Traffic Collisions attended in 2015-16

	North Wales	Mid and West Wales	South Wales	Wales
Number of RTCs attended	212	1,079	1,322	2,613
Rate per 10,000 population	3	12	9	8

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

Other incidents attended

Other SSI incidents include flooding, release of persons and animals, and so on. A full list of incident types can be found in the Key Quality Information.

Since this is the first year this data has been collected as part of the Performance Indicators data collection, a time series is not yet available. However numbers of SSIs are published in [Statswales](#).

In 2015-16 FRAs in Wales attended 7,111 SSIs other than RTCs, equating to 23 per 10,000 population. Mid and West Wales FRA attended the most (almost 4,500), equating to 50 per 10,000 population; North Wales attended 532 (8 per 10,000 population) and South Wales attended 2,101 (14 per 10,000 population). Variation between individual FRAs can be attributed to differences in operational protocols. The StatsWales table shows the numbers of different SSI incident types.

Table 4 Other incidents attended in 2015-16

	North Wales	Mid and West Wales	South Wales	Wales
Number of Other Incidents(a) attended	532	4,478	2,101	7,111
Rate per 10,000 population	8	50	14	23

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

(a) A full list of incidents included in 'Other Special Service Incidents' are included in the Glossary.

The second indicator (FRS/RRC/S/002) has two parts and looks at the casualties resulting from fires.

Deaths and injuries from fires

The Welsh Government and the FRAs are committed to the reduction of fire deaths and injuries.

During 2015-16, there were 245 deaths and persons injured³ due to fire in Wales, 52 more than in 2014-15 but slightly lower than the average (259) since 2006-07. The number of deaths and injuries is equivalent to less than 8 per 100,000 population. South Wales saw the lowest rate of deaths and injuries, 6 per 100,000 population, whilst rates in Mid and West Wales and North Wales were higher, 10 and 11 per 100,000 population respectively.

Table 5 Number of deaths and injuries arising from all fires per 100,000 population (a)(b)(c)

	North Wales	Mid and West Wales	South Wales	Wales
2006-07	12	12	7	10
2007-08	13	14	9	11
2008-09	17	9	8	11
2009-10	11	8	6	8
2010-11	16	6	8	9
2011-12	10	9	6	8
2012-13	10	7	5	7
2013-14	15	8	5	8
2014-15	8	9	4	6
2015-16	11	10	6	8

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

- (a) Excluding those who are sent to hospital for a precautionary check up or told to seek medical advice, and those receiving first aid at the scene. Non-fatal casualties recorded as not fire related are also excluded.
 (b) This chart does not show data before 2006-07 as the interpretation of the definition of fire injuries may have differed for these years.
 (c) Time series derived from data provided for previous PIs.

The chart shows how numbers of casualties have fluctuated throughout the time series, most noticeably in North Wales.

Chart 3 Number of deaths and injuries arising from all fires per 100,000 population (a)(b)(c)

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

- (a) Excluding those who are sent to hospital for a precautionary check up or told to seek medical advice, and those receiving first aid at the scene. Non-fatal casualties recorded as not fire related are also excluded.
 (b) This chart does not show data before 2006-07 as the interpretation of the definition of fire injuries may have differed for these years.
 (c) Time series derived from data provided for previous PIs.

³ Excludes casualties whose injuries were recorded as 'not fire related'. See Key Quality information for comparability issues with data contained in Fire Statistics Wales series of bulletins.

Table 6 Number of deaths and injuries arising from accidental fires per 100,000 population (a)(b)(c)

	North Wales	Mid and West Wales	South Wales	Wales
2006-07	10	11	5	8
2007-08	10	13	7	9
2008-09	16	8	6	9
2009-10	9	7	4	6
2010-11	14	6	7	8
2011-12	9	8	4	6
2012-13	8	7	4	6
2013-14	12	7	4	6
2014-15	7	7	3	5
2015-16	9	8	5	7

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

(a) Excluding those who are sent to hospital for a precautionary check up or told to seek medical advice, and those receiving first aid at the scene. Non-fatal casualties recorded as not fire related are also excluded.

(b) This chart does not show data before 2006-07 as the interpretation of the definition of fire injuries may have differed for these years.

(c) Time series derived from data provided for previous PIs.

Most injuries occurred in accidental fires (87 per cent in 2015-16) and so the overall trend in injuries occurring in such fires is very similar to the trend across all fires. Similar proportions were seen in each of the FRAs (between 84 per cent and 91 per cent).

As with the rate of casualties in all fires, North Wales had the highest rate of casualties per 100,000 population in accidental fires.

Chart 4 Number of deaths and injuries arising from accidental fires per 100,000 population (a)(b)(c)

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

(a) Excluding those who are sent to hospital for a precautionary check up or told to seek medical advice, and those receiving first aid at the scene. Non-fatal casualties recorded as not fire related are also excluded.

(b) This chart does not show data before 2006-07 as the interpretation of the definition of fire injuries may have differed for these years.

(c) Time series derived from data provided for previous PIs.

2. Effective response

The third indicator (FRS/EFR/S/003) has only one measure and relates to containment of fires.

The percentage of dwelling fires which were contained in the room in which they originated.

The Performance Indicator is intended to provide an indication of the success of FRA intervention in terms of both community fire safety messages being understood and implemented by members of the public and the timely and effective response of FRAs to emergency calls.

This is the first year these data have been collected; no similar analysis have previously been published.

In 87 per cent of dwelling fires the fire was contained to the room of origin.

North Wales had the highest percentage of dwelling fires restricted to the room of origin at 91 per cent. South Wales had the lowest percentage (85 per cent), whilst in Mid and West Wales 88 per cent of dwelling fires were contained within the room of origin.

Table 7 Percentage of dwelling fires (a) which were contained in the room of origin (b), 2015-16

	North Wales	Mid and West Wales	South Wales	Wales
Number of dwelling fires of which were contained within room of origin	388	518	641	1,547
Percentage	91	88	85	87

Source: Annual performance indicator returns, ONS Population Mid-Year Estimates

- (a) Dwelling means a property which is a permanent place of residence. As well as conventional dwellings, it includes static caravans, prefabricated dwellings and houseboats. It does not include temporary or mobile structures such as tents, marquees, sheds, outhouses, vehicles (including recreational vehicles containing sleeping accommodation) and mobile caravans.
- (b) Includes 'Heat and Smoke damage only' incidents and those fires where the damage was restricted to the first item ignited, the room of origin, the roof space only or the external roof only.

Glossary

- **Accidental fires** are defined as fires where the fire was ignited by accident or the cause of the fire is not known or specified.
- **Deliberate fires** are defined as fires where the fire was ignited deliberately or if it is suspected or recorded as 'doubtful' by the Fire and Rescue Services.
- **Injuries** include those injured as a direct result of the fire, but not fatally injured, who required more medical treatment than could be given at the fire ground. This excludes those who are only sent to hospital for a precautionary check up, those only told to seek medical advice or those only receiving first aid at the scene.
- **Dwellings** are defined as buildings occupied by households, excluding hotels, hostels and residential institutions. From 1988, mobile homes have been specifically included in the dwelling count. In 2000, the definition of a dwelling was widened to include any non-permanent structures used solely as a dwelling, such as houseboats.
- **False Alarms** are events in which the Fire and Rescue Service is called to what it believes is a reportable fire and then finds it does not exist. They are categorised as follows:
 - **Malicious False Alarms** means calls that were made with the intent of getting the Fire and Rescue Service to attend a non-existent event (both fire and special service). Includes deliberate and suspected malicious intentions.
 - **Good Intent False Alarms** are calls made in good faith in the belief that the FRA really would attend a fire.
 - **False Alarms Due to Apparatus** are calls initiated by fire alarm and fire-fighting equipment operating (including accidental initiation of alarm apparatus by persons).
- **Road Traffic Collisions (RTCs)**: where a mechanically propelled vehicle (eg a car, lorry or motorbike) on a public road or other public place causes damage to someone else's property or vehicle, or any other person or animal is injured.
- **Room of origin** means the place where the fire started and refers to any space within the property which is defined and enclosed by the structure of the property. It includes stairwells, roof voids, attics, basements and cellars, but not chimneys, flues, ducts or built-in storage furniture (eg airing cupboards and fitted wardrobes). Where a wall or door has been removed by the owner or occupier to create a larger space, the whole of that space counts as one room. Structures such as garages, workshops and conservatories which are part of, or attached to, the premises and accessible from the interior of it are also rooms for the purposes of this indicator. A roof is not a room. However, a fire which originates on the external roof of a dwelling, but is extinguished without spreading to the roof void, or to another room as defined above, is deemed to have been contained in the room of origin for the purposes of this indicator.

- **Primary fires** include all fires in non-derelict buildings, vehicles or outdoor structures, or any fire involving casualties, or rescues, or fires attended by five or more appliances.
- **Secondary fires** are mainly outdoor fires including grassland and refuse fires unless they involve casualties or rescues, or unless five or more appliances attend. They include fires in single derelict buildings and vehicles. They are reported in less detail than other fires and consequently less information concerning them is available.
- **Special Service Incidents** are non-fire incidents and are split into the following highest level categories:
 - Road Traffic Collisions (RTC)
 - Other transport incidents
 - Flooding
 - Rescue or evacuation from water
 - Other rescue/release of persons
 - Animal assistance incidents
 - Hazardous Materials incident
 - Spills and Leaks (not RTC)
 - Lift Release
 - Effecting entry/exit
 - Removal of objects from people
 - Suicide/attempts
 - Medical Incident - Co-responder/First responder
 - Evacuation (no fire)
 - Water provision
 - Assist other agencies Incident

Key quality information

On 10 November 2004 the Fire and Rescue Services Act 2004, which devolved fire and rescue services to the National Assembly for Wales, was brought into effect. In Wales, these services are provided by three Fire and Rescue Authorities (FRAs). The three FRAs cover varied geographical areas with a wide variety of risks including: fires in homes; outdoor fires; fires in business premises; road traffic collisions; rail or air crashes; chemical spills; building collapses; and trapped people or animals.

North Wales Fire and Rescue Authority provides cover for a population of almost 700,000 across a geographical area of 2,400 square miles. It employs almost 900 operational and non-operational support staff from its headquarters and its 44 fire stations.

Mid and West Wales Fire and Rescue Authority covers over half the area of Wales and a population of almost 900,000. There are 58 fire stations and over 1,300 employees.

South Wales Fire and Rescue Authority serves a population of almost 1.5 million people covering 1,085 square miles. It employs over 1,800 staff including nearly 1,500 fire-fighters who operate from 50 fire stations throughout South Wales.

Relevance

Fire statistics produced by the Welsh Government are used widely in measuring a number of targets and key performance indicators and in making policy decisions. Fire and rescue services use the data to monitor and benchmark performance and to make strategic decisions. Other interest and uses of this data are outlined in the 'Users and Uses' section of [Quality Report](#).

We regularly review our data collections and outputs to ensure that they are relevant, collect reliable data and meet user needs. We also consult our users on a number of fire data collections issues. This is part of an ongoing exercise covering all fire statistics in order to better understand user requirements and priorities for the future.

The timing of outputs is discussed with internal users on an annual basis. Regular meetings with users allow us to discuss content, format and timing of outputs. We use networks such as the Chief Fire Officers Association (CFOA) Wales groups, plus specific fire networks to reach other users.

We maintain a live list of users and encourage feedback on all our outputs and data collections.

Accuracy

At the time of publication, the rates in this release will be based on the most recently published population and dwellings data for the relevant years. In time, some of these rates may become out of date. As these changes have only a very minor effect on the results, this release will not be revised, and the latest data will be reflected only in the rates shown on our StatsWales website, and, if relevant, in future versions of this release. Similarly previous first releases in this series have not been updated to reflect changes to population and the data within those publications may differ from the figures for earlier years included in this release.

Performance Indicator denominators (e.g. population and number of dwellings) are provided to data providers as part of the data collection process. Data providers input all numerator data including fire related data from IRS.

The Welsh Government with agreement from data providers will impute data if validation errors cannot be resolved. Any such occurrences will be highlighted in the 'quality information' section of the first release. Since data collections have been undertaken by the Welsh Government, no imputation of data has been necessary.

Revised data are marked with an (r) in the statistical release.

We follow the Welsh Government's statistical [revisions policy](#).

Timeliness and punctuality

All outputs adhere to the Code of Practice for Official Statistics by pre-announcing the date of publication through the Due Out Soon part of the British Government Statistics and research web pages and the Publication Hub. Furthermore, should the need arise to postpone an output, this would follow the Welsh Government's Revisions, Errors and Postponements arrangements.

The timetable for outputs is generally developed in line with user needs and aims to ensure that outputs are published as soon as the statistics are ready.

Accessibility and clarity

Welsh fire statistics are published in an accessible, orderly, pre-announced manner on the Welsh Government website at 9:30am on the day of publication. An RSS feed alerts registered users to this publication. Simultaneously the release is also published on the [National Statistics Publication Hub](#). All releases are available to download for free.

In our outputs, we aim to provide a balance of commentary, summary tables, charts and maps. The aim is to 'tell the story' in the output, without the output becoming overly long and complicated. We provide additional, detailed data on StatsWales.

We aim to make our outputs clear for the audience and all outputs adhere to the Welsh Government accessibility policy. Furthermore, all our headlines are published in Welsh and English.

[Forms and guidance](#) used to collect data are available for download from the Statistics and Research page on the Welsh Government website.

Further information regarding the statistics can be obtained by contacting the relevant staff detailed on the release or via stats.inclusion@wales.gsi.gov.uk

More information is available in the form of [StatsWales](#) tables that accompany this release.

Comparability and coherence

Since 2009-10 the three Fire and Rescue Services have recorded all their fire incidents using the Incident Recording System (IRS). This may affect some of the performance indicators especially when data are compared with years prior to 2009-10. Between 2005-06 and

2008-09 the data were collected by the Local Government Data Unit Wales (Data Unit) on behalf of the then Welsh Assembly Government. Prior to the 2005-06 collection, data were collected by the Department for Communities and Local Government (CLG).

Data are taken from the Incident Recording System (IRS) by the Fire and Rescue Authorities. Whilst the data are accurate at the time of extraction, numbers may subsequently change as IRS is an administrative database which is updated throughout the year. Consequently the data published here may not match numbers appearing in other publications. Data from IRS will not be revised in subsequent editions of this release unless an error in the previously published figures has been detected (i.e. data in this publication is not marked as provisional).

The non-fatal casualties recorded within the second indicator FRS/RRC/S/002 exclude those casualties which were recorded as 'not fire related'. However these casualties are included in the Fire Statistics Wales series of bulletins, data published by the Home Office for England and the Scottish Fire and Rescue Service for Scotland data publications. A comparison showing the difference this change makes to the Performance Indicator is shown in the Appendix. (In April 2016 responsibility for fire statistics and policy in England transferred from DCLG to the Home Office).

False alarms quoted in this bulletin include those related to Special Service Incidents (SSIs). The statistics published in the Fire Statistics Wales series of bulletins excludes false alarms related to SSIs.

The [Fire Statistics Quality Report](#) covers the general principles and processes leading up to the production of our fire statistics. The report covers various topics including definitions, coverage, timeliness, relevance and comparability.

Other UK data:

England: The Audit Commission collected Best Value Performance Indicators for England up until 2007-08. These were replaced with a smaller set of National Indicators for Local Authorities and Local Authority Partnerships. These included indicators on arson, primary fires, fatalities and casualties. These indicators are similar to Wales but have been developed separately so care should be taken in comparing the data. Performance indicator data are not collected centrally in England however similar data is available in [Fire Statistics Monitor publications](#).

Scotland: The Scottish Fire and Rescue service has published their second [Annual Performance Review](#) (relating to 2014-15).

Other Scottish fire data are available here:

[2014-15 data](#)

[Pre 2014-15 data](#)

Northern Ireland: There are seven performance indicators, most of which are similar to the Welsh PIs. [The data are available here](#).

National Statistics status

The [United Kingdom Statistics Authority](#) has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the [Code of Practice for Official Statistics](#).

National Statistics status means that official statistics meet the highest standards of trustworthiness, quality and public value.

All official statistics should comply with all aspects of the Code of Practice for Official Statistics. They are awarded National Statistics status following an assessment by the UK Statistics Authority's regulatory arm. The Authority considers whether the statistics meet the highest standards of Code compliance, including the value they add to public decisions and debate.

It is Welsh Government's responsibility to maintain compliance with the standards expected of National Statistics. If we become concerned about whether these statistics are still meeting the appropriate standards, we will discuss any concerns with the Authority promptly. National Statistics status can be removed at any point when the highest standards are not maintained, and reinstated when standards are restored.

Well-being of Future Generations Act (WFG)

The Well-being of Future Generations Act 2015 is about improving the social, economic, environmental and cultural well-being of Wales. The Act puts in place seven well-being goals for Wales. These are for a more equal, prosperous, resilient, healthier and globally responsible Wales, with cohesive communities and a vibrant culture and thriving Welsh language. Under section (10)(1) of the Act, the Welsh Ministers must (a) publish indicators ("national indicators") that must be applied for the purpose of measuring progress towards the achievement of the Well-being goals, and (b) lay a copy of the national indicators before the National Assembly. The 46 national indicators were laid in March 2016.

Information on indicators and associated technical information - [How do you measure a nation's progress? - National Indicators](#)

Further information on the [Well-being of Future Generations \(Wales\) Act 2015](#).

The statistics included in this release could also provide supporting narrative to the national indicators and be used by public services boards in relation to their local well-being assessments and local well-being plans.
